

Project Proposal for Team 1 Summer 26 SWE3354

1. The title of your project

Interview Lens - your AI interview platform for mastering behavioral interviews

2. Team members (first name and last name)

(4 Members)

Ayro S Escobar

Ben Andre Quidlat

Hadeed Sarfaraz

Shaun Kenan Moukam

3. Details of what each member will be working on.

Ayro S Escobar - Focus on Full Stack Engineering and Database Administration

Ben Andre Quidlat - Backend and focus on stability with proper unit testing & CI/CD pipelines

Hadeed Sarfaraz - Focus on AI Pipeline & logic with Full Stack Engineering

Shaun Kenan Moukam - Frontend focusing on UI/UX components and clean routing

4. Proposed Project Implementation.

We want to, as a team, create an AI Interview platform to help college students like us prepare for behavioral interviews.

5. Project motivation:

The reason that we want to build this platform is because we understand better than anybody the difficulties of getting an internship. The market is horrible but we still want to be full fledged engineers. So with the rise of AI we can use it as a tool to help improve our chances of getting one. One major part of the interview is behavioral, we could be technical geniuses, but it does not matter if we are not able to show good people skills to be on a team. So the goal of this platform is to make sure that we would be able to leverage it in our college years, and also help other students like us improve their people skills! This would be with the end goal of having it be used around campuses nationwide.

6. Task delegation:

Ayro S Escobar- Create Database Schema and implement endpoint logic to be used all over the platform

Ben Andre Quidlat - Connect endpoints to the platform and make sure the data is talking properly

Hadeed Sarfaraz - Set up AI pipeline to handle all kinds of behavioral interview scenarios

Shaun Kenan Moukam - Create frontend components and deploy it all to a domain that anyone can see online
